

On September 27,
for Only One Special
Night Nationwide!

Famed Chimpanzee researcher Dr. Jane Goodall will appear live from Fathom Events on hundreds of movie theatre screens for a rare event that will include interaction with theatre audiences, the screening of the biographical film “Jane’s Journey” featuring guest appearances by Angelina Jolie and Pierce Brosnan; plus in-studio celebrity guests and surprises. Now 77 and still on the road 300 days a year, “Jane’s Journey” provides the first look ever at historic unseen footage, recently found in her attic in England, of her first days in Africa at 26 years old, and shows up to the present the dynamic impact she and the Jane Goodall Institute programs have contributed to the planet.
