

# FIRST RUN FEATURES PRESENTS

“Like an IMAX film minus the giant screen, *Antarctic Edge: 70° South* compellingly follows oceanographic scientists as they grapple with the escalating effects of climate change. Stirring shot, intimately and vividly documented, it is a moving portrait of individuals who devote their lives to understanding the environmental shifts that all too soon might manifest themselves on our own altered shorelines.” -LOS ANGELES TIMES

“Vivid and effective.” -THE NEW YORK TIMES

“Fascinating! A one-of-a-kind collaboration that offers rare, beautifully shot footage of the Antarctic’s rapidly changing environment.” -INDIEWIRE

A thrilling journey to one of the world’s most perilous environments, *Antarctic Edge: 70° South* follows a team of world-class scientists as they explore the West Antarctic Peninsula. In the wake of devastating events like Superstorm Sandy and Hurricane Katrina, oceanographer Oscar Schofield teams up with a group of researchers in a race to understand climate change in the fastest warming place on earth.

While navigating through 60-foot waves and dangerous icebergs, the team documents the stunning landscapes and seascapes of Antarctica, revealing the harsh conditions and significant challenges that scientists and explorers endure for months at a time.

“Beautifully filmed...breathtaking! Exquisite, eye-popping cinematography. One of the most informative films shot in the polar regions since Robert Flaherty’s groundbreaking epic *Nanook of the North*.” -Earth Island Journal

“This cinematic call to action combines thrilling natural wonders with engaging glimpses of scientists at work. An extraordinarily beautiful and important documentary.” -Womens E-News

## DVD BONUS FEATURES

### THREE SHORT FILMS

- TRACKING A GLACIAL MELTDOWN
- INSIDE OCEAN GLIDER ROBOTS
- THE GIRLS BEHIND THE GLIDERS
